### Ibn Nafis

In the year 1210, a great doctor was born. His name was Ibn Nafis. He was born near the city of Damascus which is the capital of Syria. More than 800 years ago, Ibn Nafis discovered many important things. He studied the human body and discovered that the heart pumps blood around it. It was a very important discovery. He was one of the first people to understand how the heart sent blood to the lungs and the rest of the body. At the time, other doctors did not know this. They believed things they read in very old books so Ibn Nafis taught the other doctors about his discoveries. This new information changed how doctors treated their patients. Because of Ibn Nafis, the science of medicine got a lot better. He also wrote many books and there is even a hospital named after him in Abu Dhabi.

Read the text about Ibn Nafis. For questions 6 - 10, choose the correct answer A, B or C.
