The Amazon

The Amazon is the largest rainforest in the world. It is in South America, and the temperature there is usually really high. Going there has always been a dream of mine.

On Monday at the start of January, my dream came true. I was supposed to leave at 5:30 to watch the sunrise and start my journey, but it was raining. So, the journey started later in the morning. While I was walking, I heard sounds high up in the trees and spotted monkeys. The tour guide told me that the trees are home to monkeys, birds and many insects. The Amazon is full of trees and wildlife. I love learning about all the different animals that live there. It is the largest and most colourful place that I have ever seen.

After some time, we came across a falcon and lots of butterflies. We tried to take a photo of the butterflies, but it was difficult! They moved too fast through the air. Then, it started to get dark, so we turned our lamps on. Finally, at the end of our walk, we noticed spiders on a tree. I was scared, but the tour guide said they couldn't bite me. I had worried that the Amazon would be a dangerous place. Instead, it was full of life. If you want a fun

c. How to Get into a Rainforest

Rainforests

Have you ever asked yourself why rainforests are called rainforests? This is because they have a lot of rain. Some places get rain daily. It is always very warm and wet, and it never snows.

At the top of the forest is the canopy. A canopy is made from the leaves of tall trees. The part below the canopy is called the understory. It has small trees and plants. On the forest floor, it is usually dark because the canopy doesn't let the sunlight get through. That's why many plants use other plants to get sunlight. For example, woody plants called lianas use the branches of other plants to climb from the floor to the canopy.

Each area of the rainforest has thousands of animals. Many plant-eating animals such as monkeys, squirrels, and woodpeckers like to live in the canopy. At the lower level of the forest are animals that love running and climbing trees. Chimpanzees, gorillas, and elephants usually live on the rainforest floor. There are also many coloured birds such as toucans, parrots, and macaws that live in the understory.

The most interesting fact is that many of the foods we like come
