I am also interested in the beetles. They eat the plants and seeds, that they find in the sand. It is right now I am sitting outside my tent watching a beautiful Addax, which is a big antelope. The polar bear

Polar bears live in the Arctic, which is one of the planet's coldest environments. They move around on the Arctic ice sheets and swim in the coastal waters. Climate change is a problem for the bears. As the sea ice melts, they can't move around and hunt so freely. They get very hungry and begin to starve. They're actually very good at starving for a time – they can starve for several months.

When polar bears they need to eat, they shift their habitat. They're spending more time on land and less on the ice. They're going into towns and villages and looking for food in rubbish bins. They're not afraid of people and may attack them when they're very hungry. Polar bears can't live with people, but their natural habitat is disappearing. How will they survive?

Last summer, my dad planned a holiday in Kenya for my family. It is one of the best places to see animals. When the tour guide drove us to our camp, I saw lots of green trees and beautiful lakes. I didn't know Kenya was so pretty!

On the first day, our tour guide took us on a safari. Many other people were excited because they were going on a safari too. First, we saw zebras eating grass. Then, we saw elephants and flamingos in a large lake. There were two lions in a tree nearby. They were looking at us, but they seemed lazy. They just wanted to rest in the tree. We stopped to look at them. My sister was afraid because she thought they were going to jump onto our car! So, the tour guide tried to drive away quickly. He turned the key, but the car wouldn't start! I looked back at the tree, but the lions were not there anymore. Suddenly, a loud lion roar filled the air... and it sounded close!
