# GRADE SEVEN REVISION

## UNIT 3 & 4

Nour Mohammad Ayman Mansour

Design and Technology  
Grade 7  
Revision of Unit 3 And Unit 4

---

Data Types:

1. What is the data type of each data (String, Integer or Float)?

- A. 12345 ->
- B. "123"->
- C. "Hello" ->
- D. 12.3 ->
- E. "5.7"->
- F. "12 Street"->

2. Which data can you convert or change to Integer?

- A. 12345 ->
- B. "123"->
- C. "Hello" ->
- D. 12.3 ->
- E. "5.7"->
- F. "12 Street"->

3. Which data can you convert to float?

- A. 12345 ->
- B. "123"->
- C. "Hello" ->
- D. 12.3 ->
- E. "5.7"->
- F. "12 Street"->

4. Which data can you convert to String?

- A. 12345 ->
- B. "123"->
- C. "Hello" ->
- D. 12.3 ->
- E. "5.7"->
- F. "12 Street"->

5. Complete the code to convert the integer to float:

```
Number=5
Number = _____(Number)
print(_____)
```

Design and Technology  
Grade 7  
Revision of Unit 3 And Unit 4

---

6. Complete the code to convert the integer to string:

```
Number=5  
Number = _____(Number)  
print(_____)
```

7. Complete the code to convert the string to integer:

```
Number="123"  
Number = _____(Number)  
print(_____)
```

8. Complete the code to add 5 and 7:

```
Answer= _____ + _____  
print(_____)
```

9. Complete the code to subtract 15 and 5:

```
Answer= _____ - _____  
print(_____)
```

10. Complete the code to multiply 5 and 7:

```
Answer= _____ * _____  
print(_____)
```

11. Complete the code to divide 15 and 3:

```
Answer= _____ / _____  
print(_____)
```

12. Complete the code to add the variable number and 8:

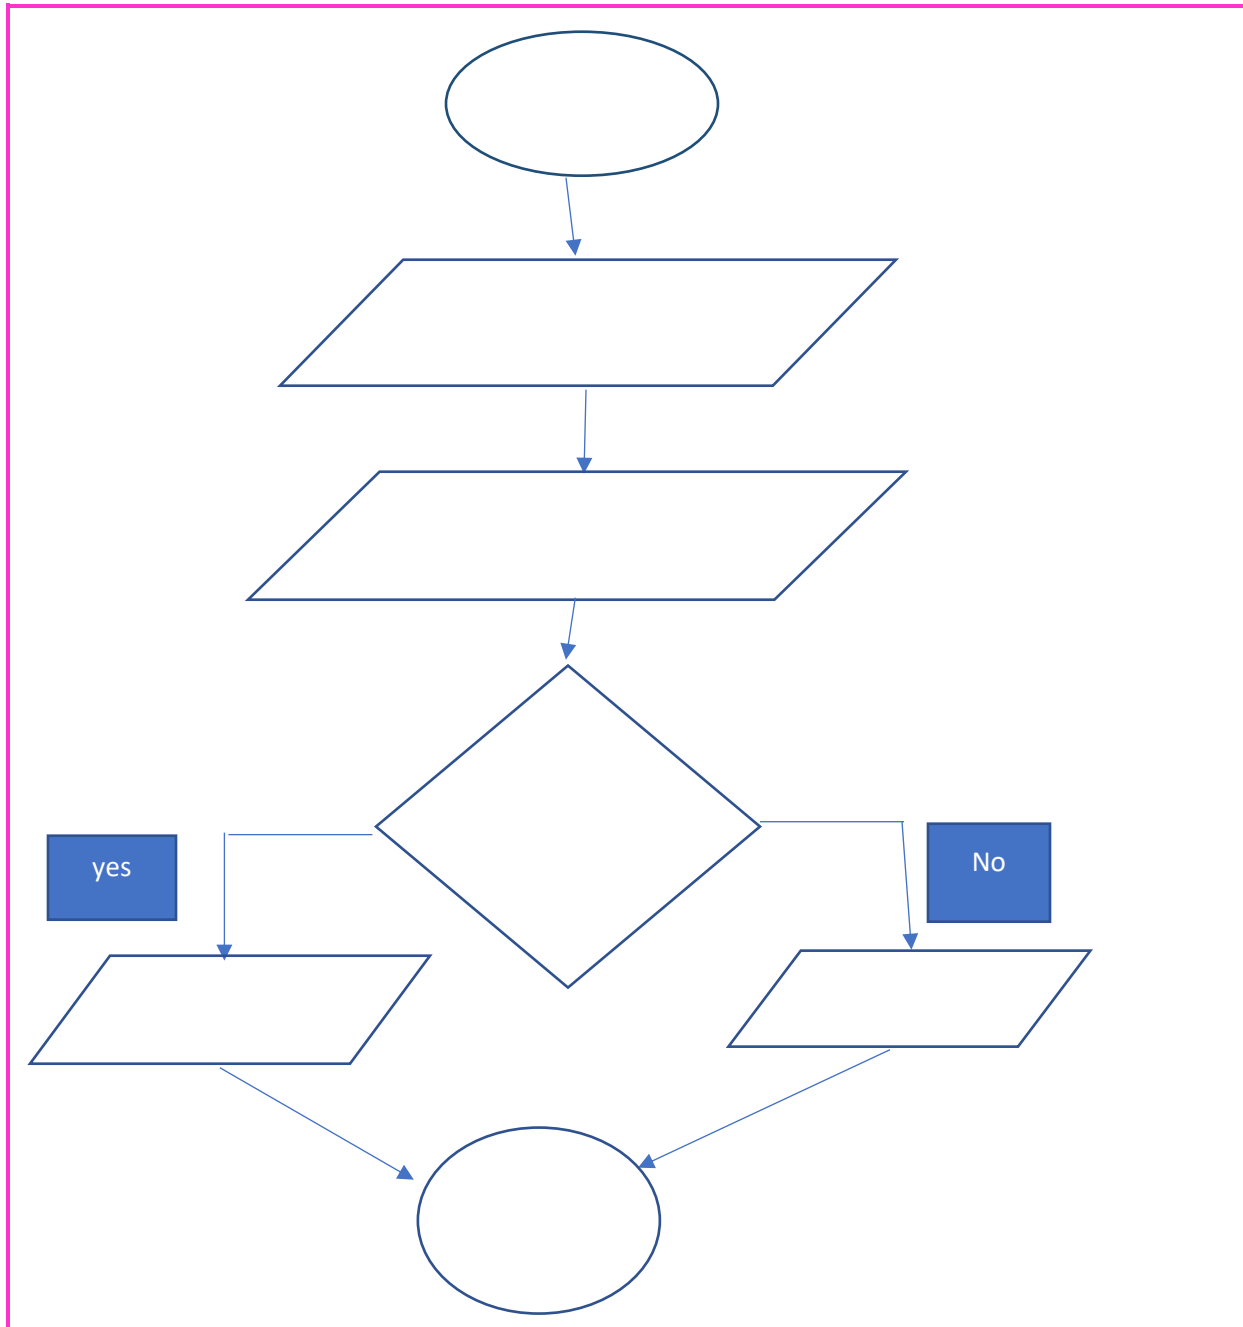

```
Number=3  
Answer= _____ + _____  
print(_____)
```

Design and Technology  
Grade 7  
Revision of Unit 3 And Unit 4

Conditional Statement

Complete the flowchart to ask the user to enter the ages of Ahmad and Noura then compare them and print who is older?

Note: You have two numbers so you will need two variables to store the ages.

Design and Technology  
Grade 7  
Revision of Unit 3 And Unit 4

---

Now complete the code:

```
AhmedAge= input(" Enter the age of Ahmed")  
NouraAge = _____
```

#Now you should convert the variables to integers

```
AhmedAge= int(_____)  
NouraAge= ____ (NouraAge)
```

#You will compare the ages using the if and elif and else.

```
if(AhmedAge < _____):  
    print(" Noura is Older ")  
elif(____ > ____):  
    print("Ahmed is Older")  
else:  
    print(" _____ ")
```

Design and Technology  
Grade 7  
Revision of Unit 3 And Unit 4

---

## Loops:

We have two types for and while:

1. For loop

Start means the first number to start counting from: أول عدد نبدأ العد منه:

End+1: means the last number added to 1: العدد الاخير ويجب أن نضيف 1 اليه:

Step: is how much your step counting is: مقدار الزيادة في كل مرة.

For count in range(start, end+1 , step):

Print(count)

Do these questions:

1. Complete the code to count from 2 to 200 in steps of 8.

```
for count in range ( _____, _____, _____ ):
print (count)
```

2. Complete the code to count from 200 to 20 in steps of -8.

```
for count in range ( _____, _____, _____ ):
print (count)
```

3. Complete this code to ask the user to enter the start and end number to count in steps of 1.

```
start=input("enter your start number")
end=_____
#you should change there types to integer
start=int(_____)
end=_____

For count in range (Start, _____, 1):
print (_____)
```

Design and Technology  
Grade 7  
Revision of Unit 3 And Unit 4

---

2. while loop

**Start** means the first number to start counting from: أول عدد نبدأ العد منه:

**End+1**: means the last number added to 1: العدد الاخير ويجب أن نضيف 1 اليه:

**Step**: is how much your step counting is: مقدار الزيادة في كل مرة.

```
count= start
while (count < end+1):
    print(count)
    count=count + step
```

Do these questions:

1. Complete the code to count from 2 to 200 in steps of 8.

```
count = _____
while(count < _____):
    print(    )
    count = count+_____
```

2. Complete the code down from 60 to 1.

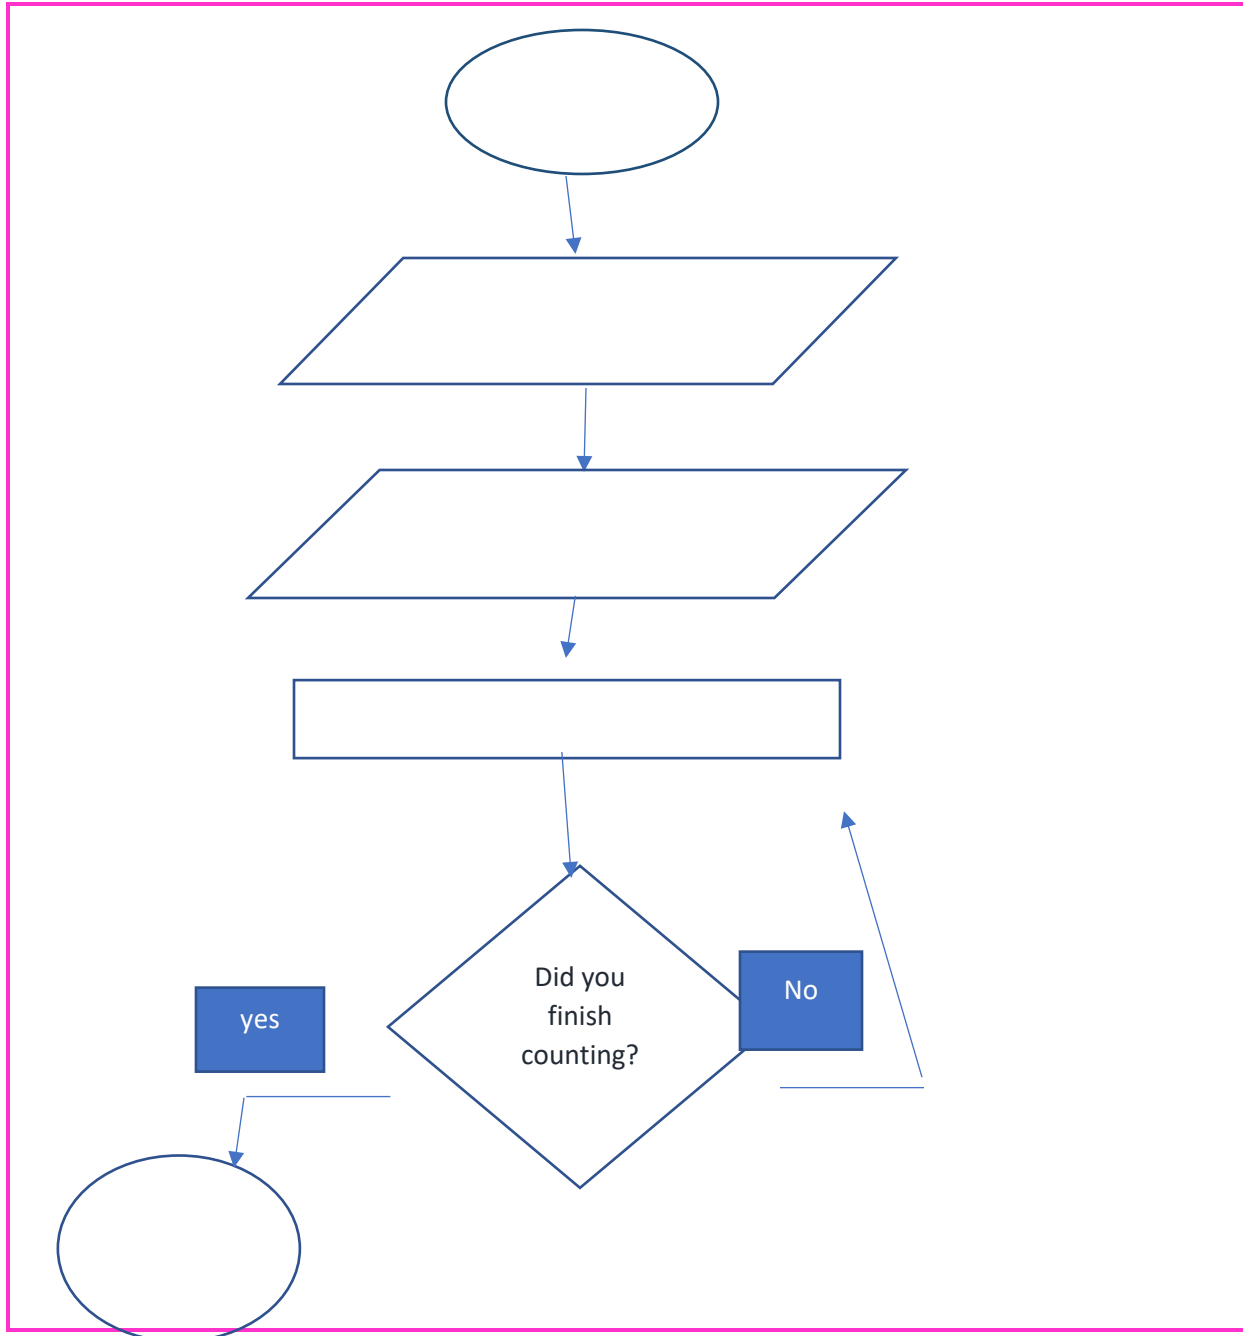

```
count = _____
while(count < _____):
    print(    )
    count = count+_____
```

Design and Technology  
Grade 7  
Revision of Unit 3 And Unit 4

---

3. Complete the flowchart to ask the user to input or enter the start and end to count in steps of 1

Design and Technology  
Grade 7  
Revision of Unit 3 And Unit 4

---

4. Complete this code to ask the user to enter the start and end number to count in steps of 1.

```
start=input("enter your start number")  
end=_____
```

#you should change there types to integer

```
start=int(_____)
```

```
end=_____
```

```
count = _____
```

```
while(count < _____):
```

```
    print(_____)
```

```
    count = count+_____
```

# THE ANSWERS:

- Data Types:
- What is the data type of each data (String, Integer or Float)?
  - 12345 -> INTEGER
  - "123"-> STRING
  - "Hello" -> STRING
  - 12.3 -> FLOAT
  - "5.7"-> STRING
  - "12 Street"-> STRING
- Which data can you convert or change to Integer?
  - 12345 -> YES
  - "123"-> YES
  - "Hello" -> NO , Because its letters.
  - 12.3 -> yes
  - "5.7"-> yes
  - "12 Street"-> No
- Which data can you convert to float?
  - 12345 -> yes
  - "123"-> yes
  - "Hello" -> no
  - 12.3 -> yes
  - "5.7"-> yes
  - "12 Street"-> no
- Which data can you convert to String?
  - 12345 -> yes
  - "123"-> yes
  - "Hello" -> yes
  - 12.3 -> yes
  - "5.7"-> yes
  - "12 Street"-> yes

Design and Technology  
Grade 7  
Revision of Unit 3 And Unit 4

---

- Complete the code to convert the integer to float:

```
Number=5  
Number = float (Number)  
print(Number)
```

- Complete the code to convert the integer to string:

```
Number=5  
Number = str(Number)  
Print(Number)
```

- Complete the code to convert the string to integer:

```
Number="123"  
Number = int(Number)  
print(Number)
```

- Complete the code to add 5 and 7:

```
Answer= 5 + 7  
print(Answer)
```

- Complete the code to subtract 15 and 5:

```
Answer=15 - 5  
print(Answer)
```

- Complete the code to multiply 5 and 7:

```
Answer= 5 * 7  
print(Answer)
```

- Complete the code to divide 15 and 3:

```
Answer= 15/3  
print(Answer)
```

Design and Technology  
Grade 7  
Revision of Unit 3 And Unit 4

---

- Complete the code to add the variable number and 8:

```
number=3  
Answer= number +8  
print(Answer)
```

### Conditional Statement

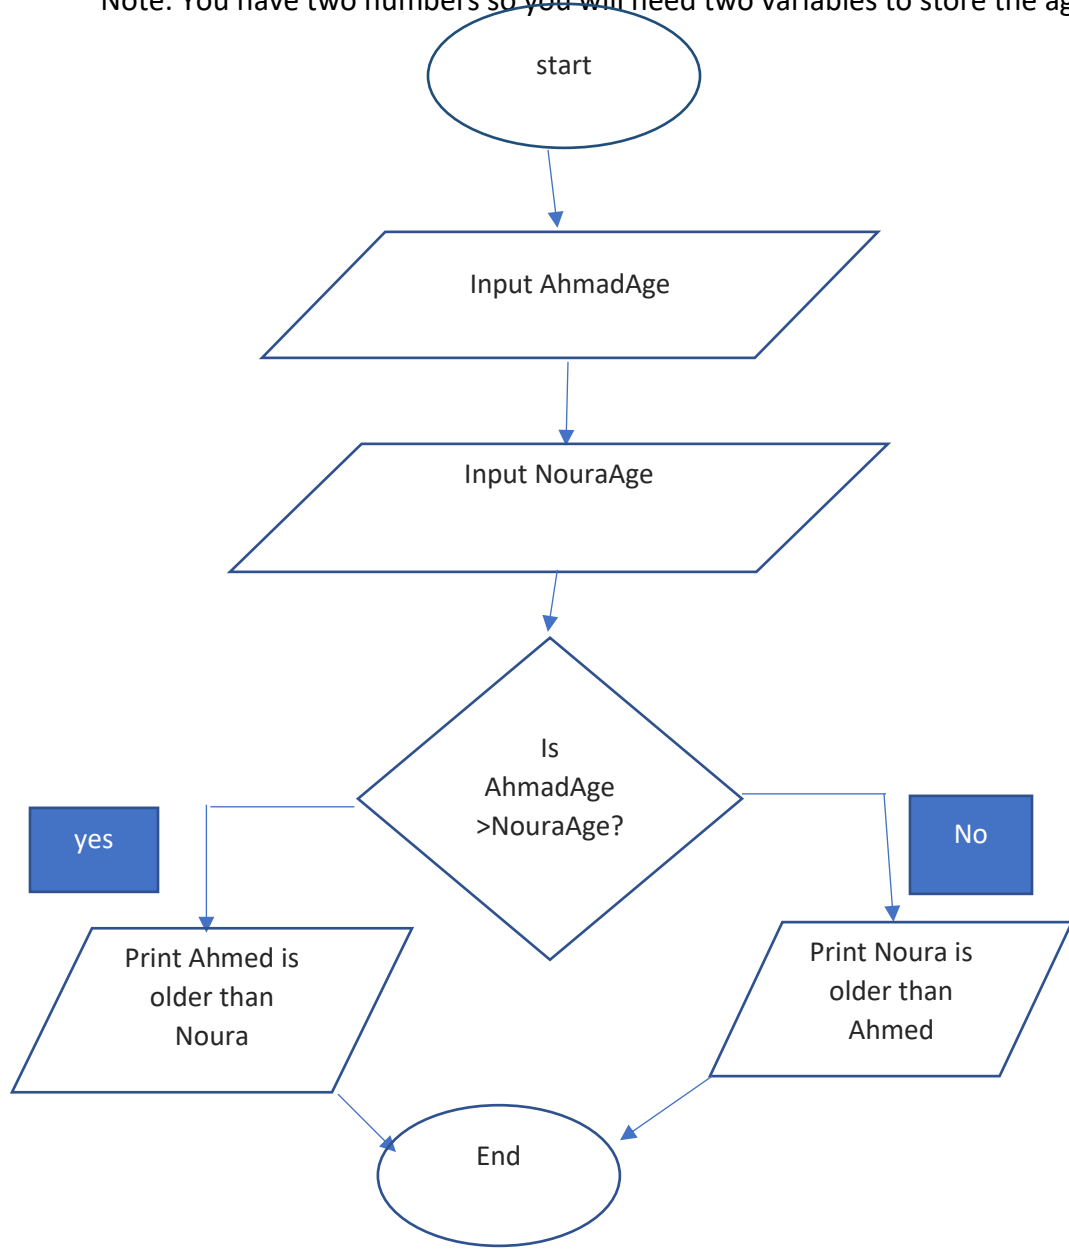

- Complete the flowchart to ask the user to enter the ages of Ahmad and Noura then compare them
- and print who is older?

# Design and Technology

## Grade 7

### Revision of Unit 3 And Unit 4

Note: You have two numbers so you will need two variables to store the ages.

Design and Technology  
Grade 7

---

- Now complete the code:

```
AhmedAge= input(" Enter the age of Ahmed")  
NouraAge = input(" Enter the age of Noura")
```

```
#Now you should convert the variables to integers
```

```
AhmedAge= int(AhmedAge)  
NouraAge= int (NouraAge)
```

```
#You will compare the ages using the if and elif and else.
```

```
if(AhmedAge < NouraAge):  
    print(" Noura is Older ")
```

```
elif(AhmedAge > NouraAge):  
    print("Ahmed is Older")
```

```
else:  
    print("Ahmed is the same age as Noura")
```

Design and Technology  
Grade 7  
Revision of Unit 3 And Unit 4

---

- Loops:

- Do these questions:

- Complete the code to count from 2 to 200 in steps of 8.

```
for count in range (2, 201, 8 ):  
    print (count)
```

- Complete the code to count from 200 to 20 in steps of -8.

```
for count in range 200,20,8 ):  
    print (count)
```

- Complete this code to ask the user to enter the start and end number to count in steps of 1.

```
start=input("enter your start number")  
end= input("enter your end number")  
  
#you should change there types to integer  
start=int(start)  
end=int(end)  
  
for count in range (start, end, 1):  
    print (count)
```
